Multiply two decimals

Check the digit calculation and the size of the product separately.

Multiply the whole-number versions. Restore the decimal places, then check the size.

Q1 1.2 × 0.35

12 × 35 = 420

Places: 1 + 2 = 3

With all places: 0.420

Also written 0.42

0.35 < 1, so the product is less than 1.2.

Q2 0.06 × 0.04

6 × 4 = 24

Places: 2 + 2 = 4

With all places: 0.0024

0.04 < 1, so the product is less than 0.06.

Q3 2.50 × 0.4

250 × 4 = 1000

Places: 2 + 1 = 3

With all places: 1.000

Also written 1

0.4 < 1, so the product is less than 2.50.

Q4 2.19 × 0.29

219 × 29 = 6351

Places: 2 + 2 = 4

With all places: 0.6351

0.29 < 1, so the product is less than 2.19.

Q5 1.8 × 0.55

18 × 55 = 990

Places: 1 + 2 = 3

With all places: 0.990

Also written 0.99

0.55 < 1, so the product is less than 1.8.

Q6 0.04 × 0.02

4 × 2 = 8

Places: 2 + 2 = 4

With all places: 0.0008

0.02 < 1, so the product is less than 0.04.

Q7 6.7 × 2.2

67 × 22 = 1474

Places: 1 + 1 = 2

With all places: 14.74

2.2 > 1, so the product is greater than 6.7.

Q8 2.11 × 0.89

211 × 89 = 18779

Places: 2 + 2 = 4

With all places: 1.8779

0.89 < 1, so the product is less than 2.11.
